

WebEOC®

Product Announcement

Version 8.3.1.4

This announcement describes changes made to the WebEOC solution. If you have questions about changes not covered in this document, more information is available on the WebEOC [Client Hub](#) or by contacting your Client Services Manager.

Improved Load Time of View Editor

Loading times for the view editor have been streamlined, reducing the time in which it takes to load an editor regardless of view type or extent of view history.

Resolved Issues with Maps Searches

The issue has been resolved that caused the **Filter** field in the **Mapping: Maps** tab, used to locate a map, to retain search terms even after the field was cleared.

Additionally, if you use the Search/Filter field in this tab, the results returned reflect all words typed in the field, as is expected.

Displayed Subscription Board Warning Icon

The warning triangle icon now appears appropriately on subscription boards that have unpublished changes.

Made Export Option Available from the Table

For WebEOC Core users, the export option is now available from the table for boards with multiple tables.

Initiated Error Warnings Before Import

When importing data using the Data Manager, if the system identifies an error with the data before the import occurs, a red warning icon appears. This notification allows you to resolve any readily-identified issues before proceeding.

Resolved Secure Map Service Issue

The issue that caused secure map services to stop working after a period of time has been resolved.
