

WebEOC® Rave® Alert Extension Product Announcement

Version 1.1

This announcement describes changes made to the *WebEOC Rave Alert Extension* plugin. If you have questions about changes not covered in this document, more information is available on the WebEOC [Client Hub](#) or by contacting your Client Services Manager.

Streamlined Board Integration

Simplified Board Integration Process

The 1.1 version of the *Rave Alert Extension* plugin gives you the freedom to easily add Rave Alert mass notification capabilities to any WebEOC board without support from the WebEOC development team. Offering both basic and advanced options, this new version lets you easily create boards or update existing boards to add powerful notification capabilities to WebEOC workflows.

Specifically, administrators with minimal coding experience can click tags during the creation of a board's input view to add the necessary short message, long message, and message initiation elements. For display views, a tag can be added that provides users the ability to access detailed alert reports with the single click of a link.

Administrators who are comfortable working in the Advanced Code Editor can add code to a board that enables the Rave solution to pull in static text and data from multiple fields for the creation of pre-crafted notifications. After pulling in this information, Rave can quickly compose a message based on these variables.
