

Ad-Hoc Notifications Plug-In 1.21.0 Release Notes

These notes describe enhancements introduced in the Ad-Hoc Notifications Plug-In 1.21.0 release for eICS that is scheduled for Wednesday, July 21, 2021. More information is available through your solution or by contacting the Juvare Support Center at 877-771-0911 or support@juvare.com.

Test Notification

Now, before sending the notification to everyone, you can send a test notification to yourself and/or your colleagues to verify that the content and delivery methods are correct. The test notification option is available on the Review page and sending one or more test notifications does not affect the delivery and response statistics.

Recorded Voice Message

Recorded voice messages can now be created using an external microphone or the microphone within your device. As an alternative to text-to-speech, you can quickly record the message, as well as the response options, for notifications and templates.
