

EMResource® Release Notes

These notes describe highlights of the EMResource 3.46 release scheduled for Wednesday, May 13, 2020. More information is available through your solution or by contacting Juvare Support at 877-771-0911 or support@juvare.com.

Interface for Updating Statuses, Premium Feature

Added a new interface in EMResource that allows external healthcare entities to automatically update data, such as equipment availability, bed availability, and emergency department capacity, for selected resources.

The interface offers near real-time updates for information in EMResource, which saves time and reduces errors associated with manual updates, while providing more up-to-date information.

Additional Status Types for Juvare Exchange

Added status types that can be synchronized with Juvare Exchange, including Ambulance/Aeromedical Availability, Adult ICU Bed Availability, and Adult ICU Bed Capacity.

Resolved Issues

- Fixed an issue in which the Event Snapshot report sometimes identified the incorrect user who made the most recent status update.
- When a validation error is displayed on the Status Change Preferences page, the currently selected preferences are maintained. Previously, these preferences were discarded and had to be selected again.
- When a validation error is displayed on the Event Configuration page, the currently selected renotification options are maintained. Previously, these options were discarded and had to be selected again.
