EMSupply™ 1.10 Release Notes

These notes describe highlights of the EMSupply 1.10 release scheduled for Thursday, August 6, 2020. More information is available through your solution or by contacting the Juvare Support Center at 877-771-0911 or support@juvare.com.

Extended EMSupply Application Programming Interface (API)

Added capability to search and view categories using an extended EMSupply API. When fully configured, endpoints set within the API allow you to search Item Types and Items in the category tree hierarchy.

Facility Forms

Added a Common Facility ID field to the Facility Form. The Common Facility ID field accepts up to 32 characters, including symbols, and allows you to map facilities in external applications.

Sublocation Inventory Field

Add a new field in the external API, which displays the date and time stamp for all updated Shipments and Resource Requests. The update allows you to perform a comparison check against data in other Juvare solutions.

Resolutions, Improvements, and Enhancements

Made general enhancements to better optimize and improve overall solution performance.
