

EMTrack® 5.9 Release Notes

These notes describe enhancements introduced in the EMTrack 5.9 release scheduled for Wednesday, September 1, 2021. More information is available through your solution or by contacting the Juvare Support Center at 877-771-0911 or support@juvare.com.

Screening Questions on Patient Forms

Now, when creating or updating a patient form, you can select which screening questions appear on the form. Selecting only relevant questions allows you to better tailor your forms for a specific event or purpose. For example, you would likely want to include different questions for a COVID-19 vaccination clinic than you would for an annual influenza vaccination clinic.

Lot Number on Immunization History

When searching for a patient's immunization history, the vaccine lot number now appears next to the manufacturer's name. Including the lot number, along with the name, date, and reporting site of the vaccine, allows clinicians to capture all necessary information for filling out the patient's Centers for Disease Control (CDC) vaccination card.

Date of Birth on Patient Details

The patient's date of birth now appears on the Patient Detail window, next to their age.
