

# Manage NWS Markers

Home > WebEOC > Guide - MapTac and NWS Alerts > Manage NWS Markers

MapTac gives you the freedom to place, move, resize, and delete markers as incidents evolve and maps change.

**Note:** If you have read-only permission to a map/image, you cannot add markers to an image.

## Place a Marker

### To place a marker on a map or image

1. In the *Plugins* section of the control panel menu, click **MapTac**.

2. From MapTac, on the left side panel, click the **Maps** tab.
3. Click the **Maps** drop-down list and select the appropriate map or image.

- Click the desired marker tab. The tab opens to show all available icons.

- Click the marker icon you want to place on the image.  
**Tip:** To see what the marker represents, hover over the icon. A pop-up tooltip reveals the marker title.
- Move your cursor to the desired location on the image and click once. The marker appears on the map/image.  
**Note:** You cannot drag and drop markers to place them on the image.

## Move Markers

When you want to move a marker, click the marker and hold down the left mouse button. Drag the marker to the new destination and then release the mouse button.

## Resize a Marker

To resize a marker, hover over the marker until handles appear. Click and drag a handle until the marker is the desired size.

## Delete a Marker

To delete a marker, right-click the marker. When the confirmation window opens, click **OK**.

Alternatively, to clear all shapes, markers, and labels from a map/image, click the **Clear Map** button.
