

Improvement Plan and the Incident

Home > eICS > Guide - Improvement Plan > Improvement Plan and the Incident

Administrators, staff, and incident command can add improvement items to their facility's Improvement Plan at any time.

During the Incident

As an incident or drill progresses, command staff and participants may notice situations that are not fully addressed or part of the command plan. Users can quickly add these issues as potential opportunities for improvement, making the issues easy to locate and review when the incident is over.

After the Incident

Dashboard

When you end an incident in eICS, the following changes appear in the Incident Dashboard:

- The **Add Improvement Item** link appears with every item in the **Event Log**, **Objectives**, and **Messages** tabs.
- The **Improvement Plan** tab appears on the dashboard.

Designated users review items in the Event Log that were flagged to determine whether follow up is needed as part of the after action activities. If an entry needs to be addressed, the user adds it to the Improvement Plan and it appears on that tab.

Post-incident, these users can also add more improvement items from the incident's **Event Log**, **Objectives**, and **Messages** tabs. When creating an item from a log entry, objective, or message, the item's description is automatically pulled into the **Description** field of the improvement item. The default status for any new improvement item is **Open**. The user can edit the description and change the status as needed.

Users can create only one item from any given log entry, objective, or message. Users can, however, add more items from the **Improvement Plan** tab and work with existing items. After creating an item, the **Add Improvement Item** link is replaced with a view link.

Recovery Menu

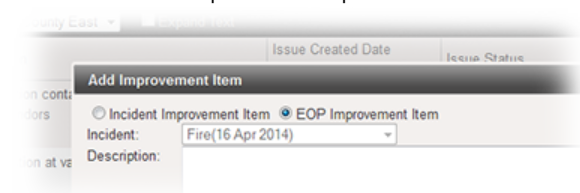

Users can also access the Improvement Plan and action items from the *Recovery* menu.

Response	Recovery	Settings
Incidents	Improvement Plan	
	Incident	Start Date
Hospital East	Campus West Partial or	28 Jul 2014

When an incident has ended, you and other users may be in charge of reviewing incident log entries, objectives, and messages to determine whether any should be added as process improvement items. When added to the Improvement Plan, they appear in **Recovery**, on the *Improvement Plan* page. The plan shows all issues and action items added after the incident was ended and those that have been added but are not related to a specific incident.

Unrelated to an Incident

Issues and action items that are not related to a specific incident can be added as well. This option is available from the *Recovery: Improvement Plan* page. When you click **Add Improvement Item**, the window includes two options at the top.

The screenshot shows a modal dialog box titled "Add Improvement Item" overlaid on a table. The table has columns for "Priority", "Issue Created Date", and "Issue Status". The dialog box contains two radio buttons: "Incident Improvement Item" (unselected) and "EOP Improvement Item" (selected). Below the radio buttons, there is a disabled "Incident:" label and a dropdown menu showing "Fire(16 Apr 2014)". A "Description:" label is also visible at the bottom of the dialog.

If you want to create this type of item, select **EOP Improvement Item**. The **Incident** field is disabled. Enter the rest of the requested information, such as the description and action items, and then click **Save**.
