

About Delegated User Management

[Home](#) > [EMResource](#) > [Guide - Regions](#) > [About Delegated User Management](#)

A user who has been assigned the **User - Configure Regional User Access** right can work with any user account in your region. This includes specifying users' general access, roles, resource access, and notification preferences. For this reason, this right is generally reserved for the region-level administrator.

To use this feature, your [region](#) must enable Delegated User Management.

Audio Alert Frequency: ** 15 (seconds)

Available Options:

- ☒ Delegated User Management
- ☐ Display Timezone
- ☐ Incoming Patient Notifications Alert Play
- ☒ IP Filter
- ☒ Last Update Years
- ☐ Status Change Name Trace

Cancel

If enabled for your region, the **User - Configure Regional User Access** right also allows the region administrator to specify resource-level administrators. These individuals can manage users for their resource. The region administrator decides which roles each resource administrator can assign to the users they manage.

By default, this feature is disabled.

For details on administrative roles, refer to [About Roles](#) and [About Resource Administrators](#).
