

Block or Unblock Connected JX Networks

Home > [EMResource](#)> EMResource - Juvare Exchange > Block or Unblock Connected JX Networks

As an administrator, you can block or unblock JX networks that share information with your participant, JX user groups, or other networks. This allows you to control the information that is visible for people who access Juvare Exchange through the participant, user groups, or networks you manage.

Networks with which you are connected share information that creates status summary, geographic data, and updates on your Juvare Exchange dashboard. When this information is blocked, it is still shared with you but does not display on your dashboard. When this information is unblocked, it displays along with other shared and commonly available information.

To block or unblock connected JX networks

1. On the main menu, point to **JX** and in the list, click **Exchange Network Management**. The *Juvare Exchange* page opens.
2. On the *Connected Networks* tab, click the name of the JX network. The network page expands.
3. Below the general network information, click the **Unblocked** or **Blocked** toggle. The toggle name changes to indicate whether the network is blocked or unblocked.
4. Click **Save**.
