

Manage the Incident Event Log

Home > eICS > Guide - Incident Dashboard > Manage the Incident Event Log

Some log entries are automatically generated for an incident. When you choose to share an incident with your health system, region, or Juvare Exchange, certain automatic log entries are visible for or sent to the sharing entities. However, you can choose whether to share manually created log entries.

During an incident, you can manually add entries such as *Major Event*, *Decision Made*, *Notification*, *Other/Misc*, *Process Improvement*, *Safety Briefing*, and *Situational Update* to the [Event Log](#).

A link appears in the **Edits** column for entries you can edit. When an entry has been shared, it is no longer possible to edit the entry; however, you can share the entry more widely if needed. If changes have been made to the entry since it was created, a **History** link is displayed that allows you to review the changes.

Additionally, you can comment on any type of entry to add information about issues, questions, or suggestions that occur related to an entry. Comments on log entries are not shared with Juvare Exchange.

Edits	Comments	Priority
Edit History	No Comments Add	Normal
	No Comments Add	Normal

To create and share a log entry

1. On the *Home* page, point to **Response** and click **Incidents**.
2. Locate the incident in the list and, on that row, click **View**. The *Incident Dashboard*
3. Click the **Event Log**
4. Click **New Log Entry**. The *New Log Entry* window opens.
5. Enter this information.

Field	Description	Example
Type	Type of manual entry.	Major Event, Decision Made, Notification, Other/Misc, Process Improvement, Safety Briefing, or Situational Update
