

Scan a Driver License

[Home](#) > [EMTrack](#) > [EMTrack Patients](#) > Scan a Driver License

There are two ways to acknowledge a patient, through the patient record or through the transport.

When using EMTrack to add or edit patient records, you can scan the person's ID or driver license to quickly populate relevant fields on the form.

Note: You need to have the proper scanning equipment.

To scan a Driver License

1. On the add or edit patient form, click **Scan Driver License**. The *Scan Driver License* window opens and initiates the scan.
2. Focus the scanner on the barcode. The solution captures the data and enters it in the appropriate fields.
